Subject: Contract Laboratory Program Data Review

From: *Marvelyn Humphrey*, ESAT Regional DO, 6MD-HE

To: V. Malott, 6SF-AP

Site : JONES ROAD GROUND WATER PLUME

Case#: 35524

SDG# : F23T4

The EPA Region 6 Environmental Services Branch ESAT data review team has completed a review of the submitted Contract Laboratory Program (CLP) data package for the referenced site. The samples analyzed and reviewed are detailed in the attached Regional data review report.

Please note that for sample F23Z8, several analytes including those designated as compounds of concern, are qualified as unusable because of low DMC or MS/MSD recoveries.

The 1,4-dioxane quantitation limits are qualified as unusable because of poor instrument sensitivity.

If you have any questions regarding the data review report, please call me at (281) 983-2140.

COMMENTS:

I. LEVEL OF DATA REVIEW

Standard data review was performed for this data package.

II. CONTRACTUAL ASSESSMENT OF THE DATA PACKAGE

CCS found the data package contractually compliant. Hard copy review did not find any contractually noncompliant items that resulted in data qualification.

III. TECHNICAL USABILITY ASSESSMENT OF THE DATA PACKAGE

The total number of sample results reviewed for this data package was 364. Some results were qualified for technical problems, and the significant problems are addressed below.

A. The 1,4-dioxane quantitation limit was qualified as unusable for all samples because 1,4-dioxane did not meet the technical minimum RRF criteria for all calibrations.

B. Some results were qualified for samples F23W8 and F23Z8 because of poor DMC performance, including unusable results for sample F23Z8.

- C. The 1,1-dichloroethene and toluene results were unusable for native sample F23Z8 because of very low MS/MSD recoveries (<20%) for these compounds.

NA = Not applicable.

ACTION ITEMS:

AREAS OF CONCERN: Target compound 1,4-dioxane did not meet technical minimum RRF calibration criteria, rendering the 1,4-dioxane quantitation limit unusable for all samples. Some results were qualified for two samples because of poor DMC performance, including unusable results for 14 compounds for one of the samples. The MS/MSD recoveries for 1,1-dichloroethene and toluene were extremely low, resulting in unusable results for these compounds for the native sample. The field duplicates had inconsistent vinyl chloride results.

NOTABLE PERFORMANCE: The data package arrived 1 calendar day early for the 14-day turnaround time requirement.

**COMMENTS/CLARIFICATIONS
REGION 6 CLP QA REVIEW**

**CASE 35524 SDG F23T4 SITE Jones Road Ground Water Plume
LAB MITKEM**

COMMENTS: This SDG consisted of two water samples, two trip blanks, two field blanks, and one rinsate for LMVOA analysis following SOW SOM01.1 with modified analysis 1381.0, which required the laboratory to analyze the samples within five days of sample receipt. The sampler identified samples F23R9 and F23S0 as trip blanks, samples F23S7 and F23S8 as field blanks, sample F23T4 as a rinsate, and sample F23Z8 as the laboratory QC sample. According to the RSCC personnel, samples F23W8 and F23Q9 (SDG F23M9) were field duplicates. One sample in this SDG was associated with trip blank sample F23R8 and field blank sample F23S6 (both in SDG F23M9). The data package was on time for the 14-day turnaround requirement but contained the following contractually noncompliant item.

- The laboratory did not seal the sample tags in a plastic bag.

Standard review was performed for this package as requested by the Region. The target compounds of concern were vinyl chloride, trans-1,2-dichloroethene, cis-1,2-dichloroethene, and tetrachloroethene with the user's desired detection limit of 5 µg/L. The samples met the desired detection limit criteria with the exception of sample F23Z8 where results for all compounds of concern were unusable because of extremely low DMC recoveries. With the exception of trans-1,2-dichloroethene, all compounds of concern had concentrations over the user's desired detection limit for sample F23W8. Sample F23W8 required reanalysis at 80X dilution because of high concentrations of cis-1,2-dichloroethene, trichloroethene (not a compound of concern), and tetrachloroethene.

The only target compounds not designated as compounds of concern that were detected at concentrations above the CRQL's were trichloroethene and bromoform in sample F23W8. The 1,4-dioxane quantitation limit was qualified as unusable for all samples because 1,4-dioxane failed the technical minimum RRF criteria for all calibrations. Two samples had low DMC recoveries, and the extremely low recoveries caused several results to be qualified as unusable for F23Z8. Toluene and 1,1-dichloroethene had very low MS/MSD recoveries, rendering native sample results for these analytes unusable.

Some results were qualified for all samples because of problems with calibration, DMC performance, MS/MSD performance, and/or inconsistent field duplicate results. ESAT's final data qualifiers in the Data Summary Table (DST) indicate the technical usability of all reported results. An Evidence Audit was conducted for the Complete Sample Delivery Group File (CSF), and the audit results were reported on the Evidence Inventory Checklist.

LAB MITKEM**

NOTE: THE FOLLOWING REVIEW NARRATIVE ADDRESSES BOTH CONTRACTUAL ISSUES (BASED ON THE STATEMENT OF WORK) AND TECHNICAL ISSUES (BASED ON THE NATIONAL FUNCTIONAL GUIDELINES). THE ASSESSMENT MADE FOR EACH QC PARAMETER IS SOLELY BASED ON THE TECHNICAL DATA USABILITY, WHICH MAY NOT NECESSARILY BE AFFECTED BY CONTRACTUAL PROBLEMS. THE ASSESSMENTS ARE DEFINED BELOW.

Acceptable = No results were qualified for any problem associated with this QC parameter.
Provisional = Some results were qualified because of problems associated with this QC parameter.
Unusable = All results are unusable because of major problems associated with this QC parameter.

1. Holding Times: Acceptable. The laboratory analyzed the samples within the contractual and technical holding time limits. The pH values indicated that all samples except sample F23W8 were acid-preserved.

NOTE: Polymerization of vinyl chloride and styrene is likely to occur in acid-preserved samples and could cause low biased results for these analytes.

2. Tuning/Performance: Acceptable. All BFB analyses met GC/MS tuning criteria.

3. Calibrations: Provisional. The laboratory met all contractual calibration criteria. The 1,4-dioxane quantitation limit was qualified as unusable for all samples because 1,4-dioxane failed the technical minimum RRF criteria for all calibrations. A few compounds failed the technical %RSD/%D calibration criteria. However, since these compounds were not detected in the associated samples, data qualification was unnecessary.

4. Blanks: Acceptable. The method and storage blanks were contractually acceptable although one method blank contained methylene chloride at a concentration below the CRQL. This concentration did not affect any sample results.

Trip and Field Blanks: Trip blank sample F23R9 and field blank sample F23S7 were associated with sample F23Z8. Trip blank sample F23S0 and field blank sample F23S8 were not associated with the samples in this SDG. Trip blank sample F23R8 and field blank sample F23S6 from SDG F23M9 were associated with sample F23W8. The only contaminant was tetrachloroethene at concentrations 1.5X the CRQL in trip blank sample F23R8 and field blank sample F23S6. The tetrachloroethene result for sample F23W8 was unaffected by this contamination.

Rinsate: Rinsate sample F23T4 was free from contamination.

5. Deuterated Monitoring Compounds (DMC's)/Surrogates:

Provisional. Sample F23Z8 failed contractual criteria for DMC performance and had very low recoveries (0% to 7%) for VDMC's 1, 3, 9, and 10. The MS/MSD analyses for this sample repeated the poor DMC performance, demonstrating a potential matrix effect. As a result, the reviewer qualified the undetected results associated with VDMC's 1, 3, 9, and 10 for sample F23Z8 as unusable. Sample F23W8 had a low VDMC6 recovery, so the reviewer qualified as estimated all results associated with this DMC for this sample.

6. Matrix Spike/Matrix Spike Duplicate/Laboratory Control

Sample (MS/MSD/LCS): Provisional. The reviewer qualified as unusable the 1,1-dichloroethene and toluene results for native QC sample F23Z8 because the MS/MSD recoveries for 1,1-dichloroethene and toluene were extremely low (6% - 10%). The %RPD for 1,1-dichloroethene was above the QC limit. Since this analyte was not detected in the native sample, result qualification was not necessary.

7. Other QC:

Field Duplicates: Provisional. The reviewer qualified as estimated the vinyl chloride result for sample F23W8 because the concentration was inconsistent with the vinyl chloride concentration in the field duplicate sample F23Q9 from SDG F23M9.

8. Internal Standards (IS): Acceptable. IS performance was acceptable.

9. Compound Identity (ID)/Quantitation: Acceptable. Target compounds detected at concentrations above the CRQL's were vinyl chloride, cis-1,2-dichloroethene, trichloroethene, tetrachloroethene, and bromoform in sample F23W8. This sample required reanalysis at an 80x dilution because of high concentrations of cis-1,2-dichloroethene, trichloroethene, and tetrachloroethene. No problem with compound identification or quantitation was detected.

10. Performance/Completeness: Acceptable. The data package was complete. The laboratory was contacted for a CSF and other issues (see the Resubmission Request). The DST in this report is the final version.

11. Overall Assessment: Some results were qualified for all samples because of problems with calibration, DMC recoveries, MS/MSD performance, and/or inconsistent field duplicate results.

ORGANIC DATA QUALIFIER DEFINITIONS

The following definitions provide brief explanations of the ESAT-Region 6 qualifiers assigned to results in the Data Summary Table.

- U** Not detected at reported quantitation limit.
- N** Identification is tentative.
- J** Estimated value.
- L** Reported concentration is below the CRQL.
- M** Reported concentration should be used as a raised quantitation limit because of interferences and/or laboratory contamination.
- R** Unusable.
- A** High biased. Actual concentration may be lower than the concentration reported.
- V** Low biased. Actual concentration may be higher than the concentration reported.
- F+** A false positive exists.
- F-** A false negative exists.
- UJ** Estimated quantitation limit.
- T** Identification is questionable because of absence of other commonly coexisting pesticides.
- C** Identification of pesticide or aroclor has been confirmed by Gas Chromatography/Mass Spectrometer (GC/MS).
- X** Identification of pesticide or aroclor could not be confirmed by GC/MS when attempted.
- Result not recommended for use because of associated QA/QC performance inferior to that from other analysis.

Resubmission Request

Laboratory Name:	MITKEM
Lab Contact:	Agnes Ng
Region:	6
Regional Contact:	Mahmoud El-Feky - EPA
ESAT Reviewer:	Linda Hoffman - ESAT

In reference to data for the following fractions:

CSF Issue LMVOA

Summary of Questions/Issues:

CSF Issue

The sample tags were not sealed in plastic bags (SOM01.1, B-22, 2.6.2.3). In the future, please follow the contract in this matter.

LMVOA

- A. Please explain why an ion other than the primary ion was used for 1,1-dichloroethene-d2 and document this deviation in the SDG narrative (SOM01.1, D-42/LMVOA, 11.2.1.7).
- B. The raw data and Form 1's for the MS/MSD samples do not list toluene as being detected. However, on Form 3 (p. 13), 5.0 µg/L is reported for toluene for both MS/MSD analyses. Please resolve this discrepancy and make the necessary corrections and resubmissions.

NOTE: Any laboratory resubmission should be submitted either as an addendum to the original CSF with a revised Form DC-2 or submitted as a new CSF with a new Form DC-2 except for replacement pages (SOM01.1, B-33, 2.6.3). Custody seals are required for all such shipments.

Please respond to the above items within 7 days by e-mail to El-Feky.Mahmoud@epamail.epa.gov and by regular mail to:
